***Allowable Subject Matter***

Claims 1, 3, 30-47 are allowed.

The following is an examiner's statement of reasons for allowance:

Closest newly cited prior art of record fails to teach or suggest the specific catalyst system claimed having at least one phenolic activator/modifier present in an amount effective to improve the catalytic activity and/or selectivity of the primary catalyst in the rearrangement of an epoxide to an allylic alcohol when compared to the catalyst alone. The prior art uses a catalyst to make an epoxide from an ethylenic double bond but fails to teach or suggest a method of making allylic alcohol from an epoxide.

Although Hoffman discloses alkalai metal hydroxide catalysts were used and obtained allylic alcohol as an unwanted side reaction in the claimed polyether polyol process, it would not have been obvious to one of ordinary skill in the art to select alkaline earth hydroxides, metal carbonate, metal carboxylate or metal acetylacetonate and assume an improved selectivity or activity for this side reaction.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
